

Rotax MAX Challenge Technical Regulation 2017
Appendix for 125 Micro MAX
(The Technical Regulations 2017 replace the Technical Regulations 2016)
Edition 2016 11 2

The 125 Junior MAX engines is the basis for the engine configurations 125 Micro MAX.

In this appendix just the deviations for 125 Micro MAX from the standard Technical Regulation for the 125 Junior MAX engine are defined.

Appendix on 1.1, Categories

Cadet karts used in the Rotax Mojo MAX Challenge (RMC) and International Rotax Mojo MAX Challenge Events (IRMCE) are divided into the following classes:

125 Micro MAX

Classes	125 Micro MAX
Chassis maximum wheel base	1010 mm
Dry tires	Mojo D1
Wet tires	Mojo W3

Appendix on 5.1, Squish gap

125 Micro MAX/evo minimum = 2, 40 mm

To achieve the defined minimum squish gap one spacer (Rotax part no. 626 420, with same shape as cylinder base gasket) in combination with at least two cylinder base gaskets (one below the spacer and one above the spacer) must be used.

The squish gap must be measured with a certified slide gauge and by using a 3 mm tin wire (Rotax part no. 580 132).

Appendix on 6.7, Ignition system

Both versions of ignition systems (Denso and Dellorto) are legal to be used.

Version 2, Dellorto ignition system

The electronic control unit (ECU) is labeled with a sticker and is still legal also if the sticker is unreadable or disappeared.

125 Micro MAX: "666814" or "666815"

The ECU tester has to show following result:

125 Micro MAX categories

- ① 66814MAX or 666815MAX
- ② !! Test OK!!

Appendix on 6.10, Carburetor

For the 125 Micro MAX class (to achieve best performance characteristic) it is recommended and allowed to adjust the accelerator stop for an opening of the carburetor slide in the range from 22 to 26 mm (measured from closed position).

To fit a stop sleeve in the carburetor to limit the carburetor slide opening is an allowed addition of material.

The extent of carburetor slide opening is free and not part of the technical scrutineering.

Appendix on 6.12, Radiator

125 Micro MAX

A specific radiators have to be used for the 125 Micro MAX engine.

Two different versions as shown in the illustrations are legal to be used.

Cooling area:

Height = 280 – 300 mm

Width = 58 – 62 mm

Thickness of radiator = 30 – 34 mm

The version (left illustration) of the radiator will be valid until December 31, 2017 only.

To remove the original flap is an allowed modification (valid for version 2, right illustration).

Appendix on 6.13, Exhaust system

Just exhaust sockets with gasket ring are legal to be used.

Diameter (A) must apply for a length (B) of at least 12 mm.

Maximum inner diameter (A) of exhaust sockets are:

125 Micro MAX: 18, 20 mm

The measurement (C) must be at least 18,5 mm.

125 Micro MAX

A specific exhaust system has to be used for the 125 Micro MAX engine.

The inner diameter of the elbow outlet at the silencer end cover has to have a minimum measurement of 21 mm.
